DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 10/23/2006 have been fully considered but they are not persuasive. In Fig. 1 of Takagi, electrode 26 contacts the semiconductor region 14 at a periphery of the bottom of the hole.

Allowable Subject Matter

1. Claims 8, 10, 12, 13 and 20 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 7, 9, 11 and 17-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Takagi (5,252,844) in view of Fuller et al. (6,335,228)

Regarding Claims 7, 9, 11 and 17-19, Takagi discloses a semiconductor device having a redundant circuit and method of manufacturing thereof where in Fig. 5, the required silicon substrate 13, required fuse 21, the required interlayer insulating film 19 and electrode 18 structures are disclosed. Takagi fails to disclose the required columnar insulator configuration and the voltage programmable fuse configuration. However,

Fuller et al. disclose a method for making an anti-fuse where in Fig. 10, columnar shaped insulating layer 910 is located centrally inside contact hole and the top portion of the columnar insulator 910 is lower than the top portion of the interlayer insulating layer 110.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required columnar insulator configuration and voltage programmable fuse configuration in Takagi as taught by Fuller et al. in order to have a semiconductor device with higher reliability.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
